THE AGENT THAT WORKS OVERNIGHT

JOBIEST

Beta Testing Operations Handbook

Version 1.0 — 2026-10-25 | Owner: Jobiest Beta Operations Team
Internal Use Only | Commit a529d99 → updated c5287c5
Beta accounts will be upgraded to PRO for full-platform testing

How to use this handbook
For Beta Coordinators & Support Assistants — plain English, step-by-step, with checklists and templates.

JOBIEST — THE AGENT THAT WORKS OVERNIGHT — Beta Testing Operations Handbook

Version: 1.0 — 2026-10-21 **Owner:** Jobiest Beta Operations Team — Internal Use Only **Commit:** 5339c46

Table of Contents

1. Cover (above)
2. Introduction
3. Objectives
4. Roles
5. Tester Onboarding
6. Stages & Schedule
7. Task Checklist
8. Collecting Feedback
9. Severity & Escalation
10. Tester Register
11. Daily Ops
12. WhatsApp Group
13. Privacy & Safety
14. Metrics
15. FAQ/Troubleshooting
16. Closure Report
17. Appendices

2. Introduction

Jobiest finds roles, prepares truthful applications from your experience, and tracks every application. You stay in control — approval is default, Auto requires opt-in. Beta means a limited group tests real features before public launch. Your feedback decides what we fix first. Available now: registration/verification, dashboard, job search/filter/save, CV builder with 30 templates + preview/download, AI tools (where data exists), application tracking. Not yet fully verified live: board freshness under load, payment checkout live, external auto-apply submission (gated).

3. Objectives

Learn: can users register/verify, understand dashboard, search/filter jobs, create/edit/preview/download CVs, get useful AI help, track applications, use mobile without errors, and what to improve most.

4. Roles

Founder/Product Owner: approves scope, decides blockers, reviews findings. **Beta Coordinator:** register, welcome, assign tasks, monitor, remind, escalate, report. **Support Assistant:** help with registration/onboarding, collect steps/screenshots, never promise fix before verified. **Technical Team:** reproduce, severity, fix, request retest. **Beta Tester:** use honestly, complete tasks, report bugs clearly.

5. Tester Onboarding

1. Receive registration details.
2. Verify beta registration.
3. Record in register.
4. Send official link: https://jobiest.com
5. Invite to WhatsApp beta group (do not invent link — use actual invite).
6. Explain purpose/rules.
7. Ask to complete profile.
8. Assign first tasks.
9. Ask to report via approved format.
10. Follow up. Confirm joined group + completed onboarding — form ≠ tested.

6. Stages

0 Internal readiness — audit, gates, site/register/channels ready. **1 Onboarding** — registration/ verification/profile/dashboard access. **2 Core features** — search/filter/save jobs, create/edit CVs preview/ download, AI tools. **3 Reliability** — repeat tasks, mobile, error handling, persistence. **4 Bug fix/retest** — share reproducible defects, track, retest. **5 Closure** — final feedback, top improvements, summary, recommendation. Timeline relative — coordinator sets start/end and daily targets.

7. Task Checklist

- [ ] Open official Jobiest website
- [ ] Register with valid email
- [ ] Receive verification email (check spam)
- [ ] Verify account (6-digit code 10m)
- [ ] Log in
- [ ] Complete profile
- [ ] Explore dashboard
- [ ] Search for jobs
- [ ] Apply filters (location, source)
- [ ] Open job details
- [ ] Save a job
- [ ] Create/edit CV (choose from 30 templates)
- [ ] Preview different templates
- [ ] Download CV PDF/DOCX check layout

- [ ] Try available AI tools (suggest skills, write summary — only with real facts)
- [ ] Track application where supported (create/update status)
- [ ] Refresh page check saved data persists
- [ ] Test on phone
- [ ] Submit feedback / bug

Controlled tests (founder approval): payment, subscription, real external application submission — never spend your money or submit real applications without approval.

8. Collecting Feedback

Bug Report: Tester ID, Date, Device/Browser, Feature, Task, Expected, Actual, Reproducible (yes/no), Steps, Screenshot, Severity, Suggestions. **Usability:** What liked? Confused? Difficult? Expected? Improve first? Continue using? Why? Bug ≠ feature request ≠ opinion.

9. Severity

Critical: security breach, private data exposure, unauthorized access, data loss, payment danger — escalate immediately private channel, do not post sensitive details in group. **High:** major feature unusable or many blocked. **Medium:** works incorrectly with workaround. **Low:** minor visual/typo. Acknowledge, record, never promise date.

10. Tester Register

| Tester ID | Name | Reg Date | Email | WhatsApp | Verified | Onboarding | Tasks Assigned | Completed | Bugs | Last Activity | Follow-up | Status | |---|---|---|---|---|---|---|---|---|---|---|---|---|

Statuses: Registered, Awaiting group entry, Onboarding, Active testing, Feedback submitted, Awaiting retest, Completed, Inactive. Restrict access, minimize data.

11. Daily Ops

Review registrations, onboarding, feedback channel, log bugs, duplicates, escalate urgent, follow inactive, update register, end-of-day report: Total registered / onboarded / active / tasks completed / new bugs by severity / resolved / awaiting retest / feedback themes / blockers / next actions.

12. WhatsApp Group

Welcome new, pin instructions/checklist, share verified updates only, encourage constructive, keep respectful, move sensitive private, separate requests from defects, never promise features/dates. Samples: Welcome — Hi [Name], welcome to Jobiest beta... Tasks — Your first task: register at jobiest.com... Reminder — Please complete... Bug request — If you hit issue, send steps + screenshot... Retest — [Bug] fixed, please retest... Thank you — Beta closed, thanks...

13. Privacy & Safety

Never request passwords/codes/API keys. No sensitive CVs/phones in group. Test payments only, no real applications during testing, no real cards for billing, use sample data, report security privately, limit register access, consent before testimonials.

14. Metrics

Registration completion = verified registrations / registrations. Verification success = verified / attempted. Onboarding completion = completed profile / registered. Task completion = tasks done / assigned. CV creation success = CVs created / attempts. CV download success = successful downloads / attempts. Job search success = searches returning results / attempts. Bugs per severity, time to acknowledge/resolve, retest pass = passed / retested, satisfaction, continue rate. No invented baselines — coordinator proposes targets.

15. FAQ

Verification not received → check spam, resend after 60s, ensure RESEND_API_KEY configured (503 truthful error). Cannot register → check email format, password 8+ number+special, phone E.164 +234..., rate limit 5/h. Cannot login → reset-password, check verified status. Blank dashboard → check onboarding-gate, refresh. Jobs not loading → must be logged in (/api/jobs 401), check filters, board availability. CV preview not appearing → ensure template selected, check JS enabled, preview is A4 210/297. Download failing → check entitlement (Free 3 total), document exists. AI error → check missing info, provider limits, retry once. Saved info disappearing → check draft autosave + localStorage, login persistence. Subscription wrong → check webhook verification, entitlements ledger, expiry. Mobile issues → test 390/320 breakpoints, report device.

16. Closure Report

Total registered/onboarded/active/completed, task completion, feedback themes, bugs by severity/ resolved/unresolved, risks, top improvements, sentiment, recommended changes, recommendation READY / READY WITH LIMITATIONS / NOT READY — with evidence.

17. Appendices

Templates for: tester register, daily report, bug report, feature request, usability feedback, onboarding checklist, weekly progress, fix verification/retest, closure report — as tables above.
