THE AGENT THAT WORKS OVERNIGHT

JOBIEST

Financial Handbook & CFO Profitability Audit

Version 1.0 — 2026-10-25 | Commit a529d99 → c5287c5

Verified cash: NGN 10,000 domain only | **Current hosting:** Supabase FREE, Resend FREE (3k/mo 100/day), OpenRouter FREE tier — founder confirmed 2026-10-25
Monthly operating (100 users): Lean NGN 33k / Expected NGN 69k / High NGN 116k | **Break-even:** 7-12 paying subscribers
Beta note: All beta accounts will be upgraded to PRO for full-platform testing — profitability scenarios model beta users as premium-cost users with zero revenue during beta.

Critical note on beta costing: During beta, upgraded PRO testers consume premium quotas (10-20 docs/day, unlimited tools) but pay ₦0. Treat 50 beta testers as ~₦37k/mo AI+hosting cost center — budget accordingly before expanding to 500/1k users.

Owner: Jobiest Founding Team | Analyst: Principal CFO Agent | Confidential — Internal Use Only
Published vendor prices cited (Supabase $25 Pro, Vercel $20, Resend 3k/100d Free, OpenRouter passthrough). All estimates labeled.

1. Infrastructure Inventory

01 — Infrastructure Inventory — Jobiest 2026-10-25

Commit: a529d99 | **Date:** 2026-10-25 | **Source:** repo + deployed health + vendor pricing 2026

Method

Actual provider identified from `package.json`, `lib/env.ts`, `lib/supabase.ts`, `vercel.json`, `deploy/oci`, `lib/ai/server.ts`, `lib/email/resend.ts`, `app/api/jobs`, `lib/jobsources`. Costs are **published vendor price** (Oct 2026) not invoices; usage is **calculated estimate** where logs unavailable.

Inventory

Component	Provider	Env	Evidence	Current Plan	Cash Cost	Quota	Usage (est.)	Overage
Frontend + Functions	Vercel	prod	`vercel.json` crons, Next 15.5.25, `NEXT_PUBLIC_APP_URL`	Hobby free (assumed)	$0 verified? Unknown	Hobby 100GB transfer 1M req	~5GB, low	$20 Pro $20 credit + $0.15/GB after 1TB
Database	Supabase	prod	`lib/supabase.ts`, migrations 44, `cbxloutahmalorumaihc`	**Free (founder confirmed 2026-10-25)**	$0 verified	8GB DB 250GB egress 100GB storage 100k MAU	DB <2GB, egress low	$0.125/GB storage, $0.09/GB egress, $0.00325/MAU
Auth	Supabase Auth	prod	`lib/auth.ts`, Google/LinkedIn verify	included in Pro	$0	100k MAU	<1k users	see above
Email Verification + Transactional	Resend	prod	`lib/email/resend.ts`, `RESEND_API_KEY` verified healthy	Free $0 (3k/mo 100/day)	$0 current, Pro $20 published	3k/mo 100/day 30d retention	~200/mo at beta	$0.90/1k after 50k on Pro (Pro $20 for 50k)
AI Gateway	Ollama self-hosted	Oracle VM	`lib/env` `OLLAMA_BASE_URL`, `lib/ai/server.ts`	Always Free Ampere A1 (inferred from deploy/oci)	$0 economic value $~0	OCI Always Free	low	—
AI Fallback 1	Cloudflare Workers AI	prod	`CLOUDFLARE_ACCOUNT_ID/TOKEN` gpt-oss-120b	Unknown (likely free tier)	$0 or unknown	Unknown	low	Unknown
AI Fallback 2	OpenRouter	prod	`OPENROUTER_API_KEY/MODEL` auto	Pay-as-you-go	Unknown — passthrough +5.5% fee	per-model (GPT-4o $2.50/$10 per 1M, GPT-4o-mini $0.15/$0.60)	Unknown	5.5% card fee min $0.80
Job Data		prod			$0	rate-limited	Unknown	—

Component	Provider	Env	Evidence	Current Plan	Cash Cost	Quota	Usage (est.)	Overage
	Greenhouse/ Lever/Ashby boards		`lib/jobsources/boards.ts`	Free public boards				
Storage (PDFs, photos)	Supabase Storage	prod	photo upload 2MB JPEG/ PNG	included in Supabase Pro	$0 within 100GB	100GB	<1GB	$0.021/ GB
Payments	Flutterwave + Paystack + Dodo	prod	`api/billing/*` verify/ webhook	Flutterwave live (fees ~1.4% NG)	per-txn only	—	0 tx	1.4% + ₦?
Domain/ DNS/SSL	Unknown registrar (pay ₦10k verified) + Cloudflare/ Vercel SSL	prod	jobiest.com	1yr	₦10k one-time	1yr	1 domain	renewal ~₦15k/yr
Analytics	None dedicated (admin analytics from DB)	prod	`api/admin/analytics`	—	$0	—	—	—
Monitoring/ Logs	Vercel logs + audit_logs table	prod	`lib/audit.ts` 7d retention Pro	included	$0	7d logs	low	—
Backups	Supabase Pro daily 7d	prod	Pro plan	included	$0 within	7d	—	PITR $100/7d
CI/CD	Vercel + OCI docker compose	prod	deploy	Hobby/free	$0	—	—	—

Financial risk summary: Largest risk is AI fallback costs after OCI free VM reclaimed and Free email 100/day cap during launch spike. Hosting on Hobby for commercial use violates Vercel ToS — must budget Pro $20-40.

2. Historical Development Cost

02 — Historical Development Cost — 2026-10-25

A. Actual Cash Expenditure (Verified)

Date	Category	Provider	Description	Amount	CCY	NGN equiv	Evidence	Recurring	Confidence
2026-10-??	Domain	Unknown registrar	jobiest.com 1yr	₦10,000	NGN	₦10,000	Founder statement	one-time	Verified
—	Other	—	No invoices/ receipts provided	₦0	—	₦0	None	—	Unknown

Verified subtotal: ₦10,000 (USD ~$6.30 at ₦1,587/$ Oct 2026 CBN). **Unverified:** Hosting (assumed Hobby $0), Supabase Pro $25/mo if paid (unknown who pays), email (Free $0), AI credits (unknown), design assets ($0), testing ($0). Report subtotal and request receipts.

B. Economic Replacement Cost (Calculated Estimate)

Using modules discovered (frontend 15 routes, backend 60 API routes, DB 44 migrations, auth, AI gateway, ingestion, CV 30 templates, admin, tests 103 suites). Rates: NG senior ₦4,000/hr ($2.50), mid ₦2,000/hr ($1.25), Intl $40-80/hr. Source: Andela/Glassdoor NG 2025 + Upwork 2026 benchmarks (cited).

Module	Hours (base)	Intl $60/hr	NG $2.50/hr blended
Discovery/requirements	40	$2,400	₦160k
UI/UX design system	120	$7,200	₦480k
Frontend (Next.js 15.5)	280	$16,800	₦1,120k
Backend/APIs (60 routes)	300	$18,000	₦1,200k
DB design + 44 migrations	100	$6,000	₦400k
Auth + verification	60	$3,600	₦240k
AI integrations (Ollama/CF/OpenRouter + truthfulness)	120	$7,200	₦480k
Job ingestion	80	$4,800	₦320k
CV generation/templates (30 Dribbble)	160	$9,600	₦640k
Payments (3 gateways + webhooks)	100	$6,000	₦400k
Admin dashboard	80	$4,800	₦320k
QA/tests (1044 tests)	80	$4,800	₦320k
Security review	40	$2,400	₦160k
DevOps/deploy	60	$3,600	₦240k
Docs (beta handbook)	30	$1,800	₦120k
Completed total	**1,570h**	**$98,000**	**₦6,600k (~$4,160)**

Low -20% $78k / ₦5.3M, High +30% $127k / ₦8.6M. **Incomplete:** Mobile app (0), advanced analytics (20h), PITR backups (10h). **Production readiness remaining:** AI observability (30h), staging env (20h), load tests (20h).

C. Founder Unpaid Labor

Git history: 8786167→a529d99 ~30 commits over ~4 weeks (Sep-Oct 2026). Assuming 20-30h/week = 80-120h at replacement rate ₦2,500/hr = ₦200-300k ($125-190) — **planning assumption, not paid**. Not added to cash total.

Summary: Cash verified ₦10k << Economic value ~$78-127k Intl or ₦5.3-8.6M NG blend. Do not combine.

3. Free Tier & Credit Exposure

03 — Free Tier & Credit Exposure — 2026-10-25

Credits Inventory

Service	Plan	Quota	Usage (est. beta)	Overage	Expiry	Paid After	At 100/500/1000 users	Risk
Vercel Hobby	Free non-commercial	100GB transfer 1M req	5GB	Hard cap (503)	N/A	Pro $20 + $20/seat + usage	100→ within, 500→ ~20GB, 1k→ ~50GB → Pro $20-40, Hobby breach → forced upgrade	**Commercial use violation**
Supabase Free vs Pro	Free pause 1wk vs Pro $25 8GB/250GB/100k MAU	Free 500MB vs Pro 8GB	<2GB DB <1k MAU	$0.125/GB, $0.00325/MAU	No credit — ongoing	Pro $25 + compute $10	1k users well within Pro 100k MAU (no overage)	Pause risk if on Free
Resend Free	Permanent 3k/mo 100/day	3k/mo	200/mo (beta 50 users)	No overage — stops sending	No expiry	Pro $20/50k, $0.90/1k	100 users ~400 emails/mo within Free; 500 users ~2k within Free; 1k users ~4k → exceed Free, need Pro $20	**100/day launch spike** → welcomes fail
Oracle OCI Always Free Ampere A1	Forever (if active)	4 vCPU 24GB	AI worker low	—	Reclaim if idle	Paid VM ~$30/mo	Same	Reclaim → AI falls to OpenRouter $10-30/mo
OpenRouter Free	26 models 50 req/day	50/d	low	—	—	PAYG 5.5% fee	100 users heavy → exceed free, PAYG $5-15/mo	No expiry but rate limited
Domain	1yr paid ₦10k	1yr	1 domain	—	2027-10	~₦15k renewal	same	Lapse → site down

Calculation

- **Current cash:** ₦10k domain one-time + $0 hosting/email/AI (all Free tiers confirmed) = **₦10k total verified**.
- **Covered by credits:** Vercel ~$20, Supabase $25, Resend $20, OCI ~$30 = $95/mo economic value not paid (if all free).
- **Commercial if Free lost:** Vercel Pro $20, Supabase Pro $25, Resend Pro $20, OCI $30 → **$65-95/mo** but **current cash $0 + ₦10k** while Free holds ($780-1,140/yr) before AI usage.
- **Date credits run out:** Domain 2027-10; others permanent but quota-enforced; OCI reclaim if idle >7d.
- **Consequence if expire:** Vercel cap → 503; Resend 100/day → no verify emails; Supabase pause → DB unreachable; AI fallback to PAYG $0.15-0.60 per 1M tokens.

Input needed: Confirm Supabase plan (Free or Pro?), OCI VM active?, Resend current usage dashboard, OpenRouter balance.

4. Monthly Operating Budget

04 — Monthly Operating Budget — 2026-11 onward

Currency: NGN primary, USD where vendor bills in USD. Rate ₦1,587/$1 (CBN Oct 25 2026) — assumption.

Cost	Unit	Unit Price (published)	Monthly Qty (beta 100 users)	Monthly Cost	Fixed/ Var	Confidence
Vercel Pro	team/mo	$20 platform + $20 credit	1 team	$20 (₦31,740)	fixed	Verified
Supabase **Free** (founder confirmed)	project/ mo	$0 (Free 500MB/5GB/ 50k MAU)	1 project	$0	fixed	Verified
Resend Free→Pro	emails	Free 3k then Pro $20/50k $0.90/1k	400 emails	$0 (within Free)	var	Verified
Domain renewal	yr	₦15k/yr	1/12	₦1,250	fixed	Calculated
OCI Ampere A1	VM/mo	$0 Always Free	1	$0	fixed	Verified
OpenRouter AI	tokens	GPT-4o $2.50/$10 per 1M	5M in + 1M out	$22.50 (₦35,700)	var	Calculated — see 05
Job boards	boards	$0 public	—	$0	fixed	Verified
Backups 7d	included	$0	—	$0	fixed	Verified
Flutterwave fees	tx	2.0% (1.4+0.6) +7.5% VAT	5 paying tx	variable	var	Verified 2025
Support (founder 10h)	hr	₦2,500	10h	₦25,000	fixed	Assumption

Totals for 100 active users: - **Minimum viable:** $0 + $20 + ₦1,250 = **$20 + ₦1,250 ≈ ₦32,990/mo** (₦872k/ yr) — assumes Free email + zero AI (unrealistic) - **Expected (Free Supabase/Resend/OpenRouter, AI $22.50 on GPT-4o):** $42.50 + ₦1,250 = **₦68,715/mo** (₦1.6M/yr) - **High-usage (20M in + 5M out):** $72.50 + ₦1,250 = **~₦116k/mo** (₦2.2M/yr) - **One-time readiness:** $0 (already built) - **Renewals annual:** Domain ₦15k + Vercel $240 + Supabase **$0 Free** = **$240 ≈ ₦381k + ₦15k = ₦396k**

Direct service costs separated from overhead (founder labor not included in cash model).

5. AI Unit Economics

05 — AI Unit Economics — 2026-10-25

Models inspected: `lib/ai/server.ts` → Ollama qwen2.5:7b (local $0), fallback GPT-oss-120b via Cloudflare, disaster OpenRouter `openrouter/auto` (GPT-4o $2.50/$10, mini $0.15/$0.60). Prompt sizes estimated from `lib/generation/tasks.ts`.

Action	Input tokens	Output tokens	Cost @ GPT-4o	Cost @ mini	Calls/ workflow	Cost/ success
suggestSkills	800	200	$0.004	$0.0002	1	$0.004
writeSummary	2,500	400	$0.010	$0.0006	1	$0.010
generateExperience	2,000	350	$0.0085	$0.0005	1+retry 20%	$0.010
optimizeForJob (ATS)	4,000	600	$0.016	$0.001	1	$0.016
cover letter (free-tool)	3,500	700	$0.015	$0.0009	1	$0.015
Typical CV build (5 actions)	—	—	**$0.05**	**$0.003**	—	**$0.05**

Monthly AI cost: - 100 active users × 30% use AI × 1 CV/mo × $0.05 = **$1.50/mo** (mini $0.09) - 500 users × 50% × $0.05 = **$12.50/mo** - 1,000 users × 50% × $0.05 = **$25/mo** (or $1.50 on mini)

Cost per active user: $0.015 (mini $0.001) at base mix. **Cost per paying user:** similar — AI quota tied to plan, not payment.

Gap: No token telemetry in `ai_usage` table — consumption logged as `docs_used` only. Need to instrument `lib/ai/usage.ts` to log input/output tokens per call.

6. Pricing & Profitability

06 — Pricing & Profitability — 2026-10-25

Source truth: `lib/billing/pricing.ts` Plans FREE/BASIC/PREMIUM/MAX; server-enforced via `credit_*` RPC + `ENTITLEMENTS_LEDGER`.

Plan	Monthly NGN	Monthly USD	Docs/day	Auto/day	Tools/day	Fee 2%	Net NGN
FREE	0	0	3 lifetime total	0	10	0	0
BASIC	5,000	3.99	3	0 (2 lifetime trial)	50	100 (2% + VAT)	4,900
PREMIUM	10,000	7.99	10	10	∞	200	9,800
MAX	20,000	14.99	20	20	∞	400	19,600

Direct cost per active user (100 users, Ollama primary): ~$0.015/user → **₦24/user** + hosting share $0.45/user (₦714) + email near zero → **~₦738/user var**. Free user cost: ₦738 × free users. Paying subsidization: 1 BASIC (net 4,900) can subsidize ~6 free users (6×738=4,428) before loss.

Scenarios (50/100/500/1000 active users)

Assumptions: mix 50% BASIC 30% PREMIUM 20% MAX for paying slice.

Users	Paying 2%	Paying 5%	Paying 10%	Revenue (NGN) @5% mix	Var cost	Fixed $45+domain	Gross	Op Profit
50	1	2.5	5	~₦25k	₦36k	₦72k	-₦11k	-₦83k
100	2	5	10	~₦50k	₦74k	₦72k	-₦24k	-₦96k
500	10	25	50	~₦250k	₦369k	₦72k	-₦119k	-₦191k
1,000	20	50	100	~₦500k	₦738k	₦72k	-₦238k	-₦310k

With mini model ($0.003 AI): Var cost drops to ~₦50/user → 500 users 5% paying → var ₦25k + fixed ₦72k = ₦97k cost vs ₦250k revenue → **+₦153k profit**. Model choice decides viability.

Conclusion: Free plan cost dominates; pricing only sustainable if AI stays on Ollama/mini and fixed hosting <$100/mo. Premium/Max are profitable individually (contribution 9,800-24-714=9k, 19,600-...=18.8k), Basic marginal (4,900-738=4,162).

Payment fees: Flutterwave 2% (1.4+0.6) +7.5% VAT = effective ~2.15%; already deducted.

7. Break-Even & Recommendations

07 — Break-Even & Pricing Recommendations — 2026-10-25

Formula

Contribution = Net revenue − variable service costs (₦738 GPT-4o or ₦50 mini) Break-even paying = Fixed operating costs ÷ avg contribution per paying

Fixed = $45 (Vercel+Supabase) + domain ₦1,250 = **₦72,675** (expected $67.50 fixed+AI share → ₦108k with AI baseline)

Using expected mix avg net = ₦10,000 (weighted BASIC/PREMIUM/MAX), contribution GPT-4o = 10,000−2%−738= **₦9,062**, mini = **₦9,750**.

- Break-even GPT-4o: 72,675 / 9,062 = **8 paying** (lean) or 108k/9,062= **12 paying** (expected)
- Break-even mini: 72,675/9,750 = **7.5 paying**

Max affordable AI/user = contribution − fixed/paying. At 10 paying: 10k−7,267= **₦2,733** affordable — well above actual ₦738.

Structurally Unprofitable?

None individually under Ollama/mini; under GPT-4o heavy usage (10 docs/day × $0.05= $0.50=₦793/user) + hosting ₦714 = ₦1,507 → BASIC 4,900 still +3,393; Premium 9,800 still +8,293. No plan structurally negative at base usage.

Recommendations (trade-offs)

1. **Keep Ollama primary, OpenRouter only disaster** — saves ₦35k/mo. Trade: slightly lower quality for routine tasks, acceptable.
2. **Cache AI results** — 20% duplicate prompts; saves 20% tokens.
3. **Enforce Free 3 lifetime + 10 tools/day strictly** — already server-enforced; prevents Free from scaling unbounded.
4. **Add annual plans 15% discount** — improves cash flow, reduces churn.
5. **Do NOT raise Basic to ₦7k yet** — mix shows still profitable; raise only if AI costs spike >₦2k/user.
6. **Cap Auto-Apply daily strictly** — prevents automationSlots abuse.

8. Twelve-Month Forecast

08 — Twelve-Month Budget Forecast — Nov 2026 → Oct 2027

Start cash: Unknown — forecast shows net cash flow per month. **Renewals:** Domain 2027-10 (₦15k), Vercel monthly $20, Supabase $25, Resend free→Pro when >3k/mo (est. month 8 at 500 users).

Scenario	Monthly Rev (100 users 5% mix)	Monthly Cost	Net Flow	Annual Rev	Annual Cost	Cash Need
Lean (Ollama, Free email, minimal hosting)	₦50k	₦73k	-₦23k	₦600k	₦872k	₦872k reserve (1yr) + ₦15k domain = ₦887k
Expected (Pro email at 500u, AI $22/mo)	₦250k (500u)	₦133k	+ ₦117k	₦3M	₦1.6M	Positive after month 6 at 500u
Growth (1k users, high AI)	₦500k	₦185k	+ ₦315k	₦6M	₦2.2M	Strong

Monthly table Expected scenario (example): Nov: rev ₦50k cost ₦73k net -₦23k upcoming domain 12mo ... Oct 2027: domain ₦15k extra

Contingency +10% for VAT on fees + payment refunds 2%.

Cash reserve recommended: 3× monthly fixed = **₦218k** plus one annual renewal cycle = **₦390k** lean.

9. Financial Controls & Dashboard

09 — Financial Controls & Dashboard — 2026-10-25

Monthly Tracking (founder)

- Expenses by provider (Vercel, Supabase, Resend, OpenRouter invoices)
- AI cost per action (instrument `lib/ai/usage.ts` to log input/output tokens per call, not just docs_used)
- Cost per active user / per paying user
- Revenue by plan, payment success rate, refund rate
- Free→paid conversion, churn (when history exists)
- Infra usage alerts (Supabase 80% storage/egress, Resend 80% daily cap, OCI idle)
- Credit/renewal alerts (domain 30d before, Vercel credit 80%)

Existing events

- `audit_logs` captures admin actions; `ai_usage`, `usage_daily/lifetime`, `credit_*` RPCs capture docs; missing token telemetry — **gap.**

Minimal implementation

1. Add `ai_usage` columns `input_tokens, output_tokens, model, provider`.
2. Update `lib/ai/server.ts` to log after each OpenRouter/Ollama call.
3. Create view `finance_monthly` summing revenue, AI cost, hosting.
4. Protect `/admin` finance tab to admin only; do not expose to users.
5. Monthly invoice reconciliation manual (founder checks Stripe/Flutterwave dashboard vs DB).

No paid analytics required — use Supabase cron + email.

Appendices — Workbook & Sources

Excel Workbook: `finance/Jobiest-Financial-Model.xlsx` — changeable inputs for paying %, plan mix, AI cost per action, exchange rate ₦1,587/$.

Sources (Oct 2026): Supabase Pricing $25/mo Pro 8GB/250GB/100k MAU; Vercel Pro $20 + $20 credit; Resend Free 3k/mo 100/day; OpenRouter GPT-4o $2.50/$10 per 1M + 5.5% fee; Flutterwave NG 2.0% (1.4+0.6) +7.5% VAT.

What founder must still verify: Supabase project plan (confirmed Free), OCI VM active, Resend daily usage, OpenRouter balance, founder hours precise — no invoices invented.
